Profile

I am a undergraduate student at the school of computing-NIBM (National Institute of Business Management). I chase new technologies and extensive knowledge about software engineering fields & I am most interested in UI/UX designing , web development & mobile application development. A hardworking, responsible & self-motivated person with strong communication skills at all levels. My competencies include quickly learning programming languages, designing pursuing new skills, problem solving, communication and presentation abilities which are developed with my studies. I earn to do the best in my career path with potential employment prospects. I would welcome the opportunity for further discussion on my application in order to build up a long/short-term career in your reputable organization where i can prove my potentials through my academic and practical knowledge acquired my studies. With my experience at school & university, this will make me ready a successful career.

MY PROJECTS

Grocery Billing system

I created this project to allow the admin of the cafe to add item, update and delete items and save to this system. This system also enables the owner to check the store. And a bill is printed to the customer after the transaction. Admin has a logging to log into the system.

Technologies : Java

Database : My Sql

Milano Movie Theater Website

The project focuses on creating an online ticket booking system for Milano movie theater, featuring an Admin panel for administrators to manage web page content. Admins can perform actions such as inserting, deleting, updating, and viewing data. Customers have the ability to choose movies, book tickets, and stay informed about currently screening movies.

Technologies : PHP, Javascript, CSS, html

Database : My Sql

Flower Shop Website

The project focuses on creating an online flower ordering system, featuring an Admin panel for administrators to manage web page content. Admins can perform actions such as inserting, deleting, updating, and viewing data. Customers have the ability to choose flowers, order flowers.

Technologies : PHP, Javascript, CSS, html

Database : My Sql
